

Custom Hose Reels

KlineFire custom made hose reels come in a range of sizes, colours and materials.

We pride ourselves on Australian made products, with all manufacturing done in our Noble Park warehouse.

Thanks to our in house manufacturing facilities, we have the unique ability to interchange many of the materials inside a hose reel. This means we can custom make a hose reel to suit almost any environment.

All custom made hose reels are pressure tested as per Australian Standard AS/NZS1221.

Our heavy duty and standard reels are available in multiple colours including:

- Red: Fire
- Lilac: Recycled Water
- Green: Rainwater or Wash-down
- Blue: Foam

We also offer stainless steel hose reels for use in but not limited to: Mining, Marina and Corrosive environments.

Our friendly and knowledgeable team are more than willing to discuss a custom reel for any application. From a standard 36mm x 19mtr fire hose reel, to a blue wash down reel with heavy duty bearing, our custom hose reels are made to suit the end user.

Overview and data sheets on our custom reels are available, for more information on please contact our sales team.
